

KEY SCENARIOS WITH THE .NET EDGE

Java and .NET Technical Integration

Microsoft® SQL Server™ 2005 **Reporting Services** offers centrally managed security and subscription features and rich report creation capabilities. Users can pull content from various sources and publish customized reports in one of many reporting formats.

With SQL Server 2005 Analysis Services, developers can use a wide variety of industry-standard data mining algorithms to design, create, and visualize data mining models that are constructed from other data sources. By employing these services together, organizations gain a highly effective business intelligence platform.

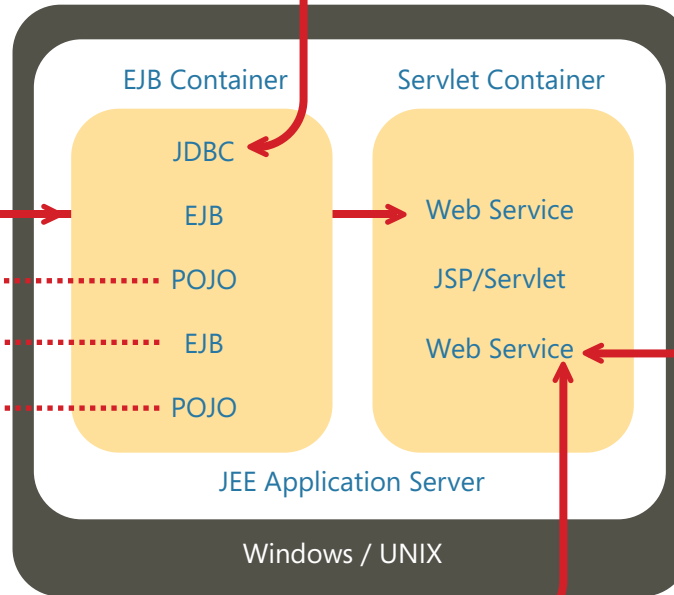

Windows® Presentation Foundation (formerly code-named "Avalon") offers a superior user experience, complemented by a comprehensive tool set.

Rich Client
Windows Presentation Foundation, Windows Forms
